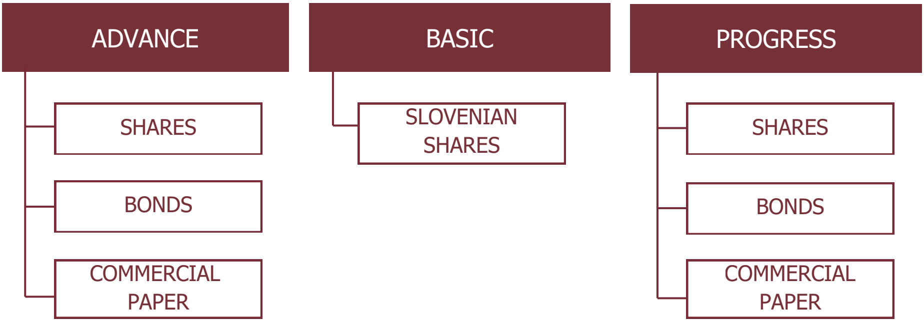
SIENTER

MULTILATERAL TRADING FACILITY

SI ENTER is a Multilateral Trading Facility (MTF) established under the auspices of the Ljubljana Stock Exchange. It represents an alternative to the regulated market for small and medium-sized enterprises entering the capital market, as well as for investors seeking new investment opportunities.
SI ENTER offers investors opportunities to invest in more than 50 Slovenian financial instruments that, prior to their admission to this market, were traded exclusively on the so-called grey market (OTC market). Multilateral trading facilities are also present in other European countries and serve as a meeting point between investors and small and medium-sized enterprises.

Market Structure and Products

New and diverse investment opportunities of the SI ENTER market are available to investors in the equity market and the debt securities market. Carefully selected market sub-segments are designed to meet different investor preferences for accessing investment opportunities, ranging from the basic BASIC segment to the more advanced ADVANCE and PROGRESS segments.



The BASIC segment is the most fundamental segment and includes shares of Slovenian companies that meet the basic eligibility criteria and are not listed on any other trading venue. The shares of companies are admitted to trading at the initiative of the Exchange or its members. Investors should be aware that companies in this segment are not subject to any obligations to disclose regulated information.

The ADVANCE segment serves as an entry point for companies that are entering the stock exchange and the capital market for the first time. Trading is conducted in the same manner as on the regulated market, while companies are subject to less stringent admission and transparency requirements. The admission of financial instruments is based on the company's application, with simple requirements and a fast admission process.

The PROGRESS segment is intended for small and medium-sized enterprises (SMEs) and provides a higher level of transparency and public disclosure compared to the ADVANCE segment. Prior to admission, a company must cooperate with an Advisor, who provides support in documentation, reporting, and disclosure obligations. This segment represents a preparatory step prior to admission to the organised regulated market and was developed in cooperation with the Zagreb Stock Exchange.

Why trade on the SI ENTER market?

The market is carefully designed for all investors interested in additional investment opportunities in the dynamic Slovenian economy. It is specially tailored for fast-growing companies or companies with a clear vision preparing for the next stage of corporate development, thus offering a proven freshness that is essential in today's Slovenian market.

ADVANTAGES

For investors:

- Centralized trading through a single platform, enabling **faster and easier** order execution.
- **Direct monitoring of current market prices.**
- **Concentrated trading in one place**, which improves liquidity and allows faster entry and exit from investments.
- **Trading on SI ENTER is organized, standardized, and much more efficient** than bilateral coordination between parties.
- **Access to reference market prices and other important investment data.**
- **A transparent market**, giving all participants access to relevant trading information.
- **Reliable settlement of SI ENTER transactions** (the same as on the stock exchange).

For companies:

- Presence on the SI ENTER market **increases visibility and serves** as an excellent reference.
- **Improved financing structure** through diverse issuances of financial instruments.
- Companies can use feedback from the investment community to adjust and **enhance their management structure.**
- Listing securities for trading with simple conditions, procedures, and low costs allows companies to **raise capital through an additional channel.**
- **Valuable experience in investor relations** through SI ENTER as a transitional stage for listing financial instruments on the stock exchange.

How trading works on the SI ENTER market?

On the SI ENTER market, securities are traded using the established Xetra® system, which allows the use of the same orders and other functionalities as on the stock exchange. Trading is conducted exclusively through an auction method, whose main advantage is a higher concentration of orders and greater visibility, which in turn improves price formation and reduces volatility.

The SI ENTER market allows you to execute orders through the same stockbrokers as on the stock exchange.

How and where do you get information?

On the website www.sienter.si, where the following are always available:

- Trading data with a 15-minute delay
- List of publication venues, where information is accessible for each SI ENTER market company
- Market rules
- Other relevant information

Investment recommendations, regular reports, trading data, and other useful information about individual securities and the market can be provided by your chosen stockbroker who is a member of the SI ENTER market.

Information about companies and their operations can be obtained through publications at the following possible locations of their choice:

- **Company website**
- **AJPES**
- **SEONET** – an established system for publishing information about the operations of companies listed on the stock exchange
- **INFOSTORAGE** – a central system for storing regulated information, enabling fast, efficient, and transparent delivery of information to investors

DISCLAIMER

The SI ENTER market is an alternative market with lower disclosure requirements than the stock exchange. As a result, investors face higher risks when investing, as the transparency of company operations is lower.
The reference price (i.e., the price of the last executed transaction) serves as the basis for triggering auction interruptions. In the BASIC segment, where shares are listed without company participation, the exchange determines the initial reference price based on data from the company's most recently publicly available annual report. This price is not a result of market formation until the first transaction is executed.
The Ljubljana Stock Exchange does not assume any responsibility for any damage arising from the use of such technical values or other information from this brochure. The content of the brochure is for informational purposes only and does not constitute an offer or recommendation to buy or sell securities. Before making any investment, investors are advised to consult a professional.
